Supplementary figure S1

Supplementary figure S1. Gating strategy for flow cytometry analysis of nMZ B cells. Lymph node cells from naïve DBA/1 mice were stained for B220, CD1d and CD23 to identify nMZ B cells and FO B cells. First, the cells were gated as lymphocytes based on forward and side scatter properties (**a**). Thereafter doublets were excluded (**b-c**) and the B220⁺ cells (**d**) were further gated as FO B cells (CD23^{hi}CD1d^{lo}) or nMZ B cells as (CD23^{lo}CD1d^{hi}) (**e**). FO, follicular; nMZ, nodal marginal zone
